Palo Alto, Calif, September 10, 2014 – HP Software today announced that it has been named a Leader in the 2014 Magic Quadrant for Integrated Software Quality Suites by Gartner Research.

Gartner states the following about HP in the Magic Quadrant: *“HP is the market share leader in performance testing and test management, making investments in expanding its capabilities to incorporate cloud and mobile, and connecting DevOps features, including integration into continuous integration tools and life cycle virtualization solutions.”*

HP's Integrated Software Quality portfolio includes market share leading automated performance and functional testing solutions, manual testing, mobile testing, dynamic and static security testing, and comprehensive test management. The portfolio also provides Service Virtualization and Network Virtualization solutions, including lifecycle virtualization capabilities from Shunra, which HP Software acquired earlier in 2014. Over 10,000 customers rely on HP quality and testing solutions to ensure a consistent, high-quality customer experience for the software that fuels business innovation.

Fast path to quality with HP solutions

Earlier in 2014, HP Software announced HP Apps 12, which added new capabilities to the functional, performance and mobile testing suite, and broadened SaaS support. HP Apps 12 also provided new community editions which give users a quick start with 50 free licenses of HP Load testing software. By providing our customers with a choice of on premise or SaaS-based solutions, and 'get started' packages free of charge, quality teams can quickly ramp up their testing needs at the speed of an agile business.

“In today's rapidly changing marketplace, delivering applications fast with confidence is key to business success and quality matters now more than ever,” said Raffi Margaliot, vice president and general manager, HP Software Application Delivery Management. “We are pleased that Gartner and our customers continue to acknowledge HP's flexibility, extensibility and completeness of our portfolio to tackle the quality needs of today's modern, cloud, web, mobile, and packaged applications.”
